The British Society for Oral Medicine

Juniors Group Meeting

Saturday November 29th 2003

Aims and learning Outcomes

Oral aspects of HIV infection and sexually transmitted diseases – Professor Porter

The aim of this session is to provide an overview of the oral manifestations of HIV infection and potential presentations of sexually transmitted diseases in the orofacial region.

By the end of this presentation you will have an understanding of:

1. The oral manifestations of HIV infection and their management.
2. The epidemiology of HIV and routes of transmission.
3. The various presentations of other viral and bacterial sexually acquired infections in the orofacial region.

HIV-associated malignancies - Dr Bower

The aim of this presentation is to provide the participant with an awareness of the typical malignancies, which patients with HIV infection may be at risk of

By the end of this presentation you will have an understanding of

1. The prevalence and presentation of the most commonly encountered HIV-associated malignancies in both the head and neck and rest of the body
2. The aetiology of these malignancies
3. Management of HIV- associated malignancies, novel therapeutic agents and adverse effects during treatment

Update on HIV-associated infections - Dr Cropley

The aim of this session is to provide the participant with an understanding of the range of infections which patients with HIV infection are at risk of, their management and prevention.

By the end of this presentation you will have an understanding of

1. The different types of infection which patients with HIV infection are at risk of at varying CD4 counts.
2. The presentation of these infections.
3. Their management and prevention.

Update on antiretroviral therapy - Dr Gillece

The aim of this session is to provide the participant with a broad understanding of current strategies for the treatment of HIV infection.

By the end of this presentation you will have an understanding of

1. The different classes of antiviral agents used in treating HIV infection
2. The mode of action of these agents and their clinical use
3. Their efficacy
4. The emergence of resistance
